Introduction to the „LIGHTHOUSE" SECURA HINGELESS Edition

The "LIGHTHOUSE" albums in SECURA HINGELESS Edition (known as "SF" edition) provide the collector with the most up-to-date and highest quality means of stamp collecting. No hinges are needed; nor does one have to buy stamp mounts as the albums come already equipped with them.

The SECURA HINGELESS albums are suitable alike for used as well as mint stamps and affort them greatest possible protection against damage. With unused stamps, moreover, the original gum will stay fully preserved. In other words, mint stamps remain mint and therefore retain their full value. The possibility of mint stamps drawing moisture and sticking to album pages is entirely eliminated.

Each stamp space in the "SF" edition has its individual crystal-clear HAWID pocket.

Inserting the stamps in the pockets is simple and easy. All one needs to do is to slightly lift the upper flexible foil with the tip of a finger on your left hand and to use a pair of tweezers in your right hand to place the stamp between the upper and lower foils. Push the stamp all the way in right against the seam that holds both foils together.

The clamping effect of the seam holds the stamp securely in place so that it will neither shift nor fall out. Even so, removing the stamp from the pocket with the stamp tong will not harm its perforation in the slightest and is just as easy as the insertion. This is a great advantage of SECURA HINGELESS over other systems of hingeless albums.

Use care in lifting the top foil. Lift it as little as possible so as not to jeopardize the seam's clamping effect. By no means seize upper foil with two fingers and tear it upwards.

Due to the cutting process in manufacturing the pockets, it can happen that the top foil of one or the other pocket tends to adhere to the lower foil. In such a case it is recommended to bend the whole album page slightly inwards. The thereby effected different tension between the foils will make them separable.

On the reverse side hereof there is a specimen of a transparent HAWID strip which is gummed on its back. It can be cut up into small pockets of required size so that the collector has a means to stick them into the album if and where he would like an extra stamp to be added to his collection. Do not use so-called "stick-all" adhesives on HAWID mounts but only water-soluble glue or better still specially tested HAWID gum which sells in small tubes.

HAWID strips or ready cut mounts in many different sizes are available at every reputable stamp dealer the world over.

Pockets for very large size blocks may be sealed if so desired. Take a strip of paper, dip it in benzene and let it dry till the liquid has evaporated and will not shine any more on the paper. Then draw the strip between top and lower foil along the edge which you wish to seal. Light pressure with your finger tips will then make the foils adhere to each other.

GUARANTEE: The pockets are made of polystyrol foil, one hundred percent free of chemical softeners. They thus are perfectly neutral and will not over any length of time react on either the paper, the color, or the gum of any stamps hitherto known. A mint stamp purposely moistened and stuck into the pockets will spring loose again as soon as dried. The foil is water-repelling and resistant to acids, alkalis, alcohols, and oils. It is soluble, however, in benzene, ether, turpentine, and other hydrocarbons.

SECURA HINGELESS albums are available with t r a n s p a r e n t pockets only as the use of pockets with black underfoil would render the album's illustrations and text invisible.
